Dear Hiring Manager,

I am writing to express my interest in joining your team as a Full Stack Engineer. I bring more than seven years of experience building scalable web applications with TypeScript, with a strong focus on headless e-commerce, and over three years of hands-on work with AI-assisted development. I am excited about roles where solid engineering and real business impact go hand in hand.

Most recently at Form Factory, I developed next-generation headless Shopify storefronts using Hydrogen and Remix for brands such as Chubbies. I owned features end-to-end, from technical design to deployment and monitoring, and integrated a wide set of platforms across search, reviews, loyalty, returns, email marketing, and analytics, including Pack Digital, Constructor, Rivo, Yotpo, Loop Returns, Klaviyo, Segment, and Elevar. My work centered on performance, SEO, accessibility, and stability in production, making sure each storefront stayed fast and reliable as the business grew.

Before that, I built a strong foundation across very different environments. At Fusion Specialty, I helped maintain frontend standards across multiple products, wrote automated tests with Jest and Testing Library, and contributed reusable components to the design system. At Dock, I architected the company's core platform on a microservices architecture, consolidating products into a centralized dashboard and mentoring junior developers. At IBM, I developed a dashboard used to monitor IBM machines globally and supported mission-critical enterprise systems. I also co-created io.insure, the first M&A marketplace for the insurance industry.

I have used ChatGPT, Cursor, and Claude in my daily workflow since their early days. For me, AI is a force multiplier: it helps me ship faster, refactor with confidence, write tests, and debug complex issues, while I stay responsible for architecture, code quality, and careful review of everything that goes to production. I would be glad to bring this approach to your team and help it adopt AI tools in a practical, reliable way.

I am available to start immediately and am comfortable working remotely with distributed teams across time zones, as I have done with companies in the United States and Australia. Thank you for your time and consideration. I would welcome the opportunity to discuss how I can contribute to your team.

Sincerely,

Cesar Fonseca
